Dept. of Parasitology, Madras Veterinary College, Madras - 600 007

Cell mediated immune response was studied by Leucocyte Migration Inhibition Test (LMIT) using the lymphocytes obtained from 4 calves immunised with schizont infected lymphoid cells of *Theileria annulata* of LXXIV(MN) - Isolate at twentieth passage level and the lymphocytes from control calves.

The migration inhibition of leucocytes of the vaccinated calves was found to vary between 50 to 86 per cent.
