“A STUDY ON FINANCIAL PERFORMANCE OF AKSHAY SEED”

ABSTRACT

Keywords: Working capital, Capital structure, Profitability, Risk, Sustainable growth

Seed is the most important input component for productive agriculture. The expansion of seed industry has occurred in parallel with growth in agricultural productivity. Indian seed market is undergoing an important transformation for the past one-decade and more. The increasing private participation in seed production, development of new varieties for value added crops and introduction of genetically modified varieties has characterized the new seed regime. The study was carried out at Junagadh district of Gujarat state in the year 2018. The data was collected from annual report of the company. Ratio analysis was used to represent the working capital performance, capital structure and profitability position of the company. Risk analysis was used to represent the effect of risk factors in the company. Sustainable growth model was used to forecast the future growth by changing financial policies. From the study, it was concluded that the overall financial performance of the Akshay Seed was good. The liquidity position of the company was sound. The company has three times more debt capital than owned capital, which shows that the company has high burden of payment of interest. The profitability of the company was good during the study period. The company has moderate risk policy and the relationship between profitability and risk factors were positively correlated. The company have to change its financing policy for growing more than existing growth rate.
