Validation plot of log input amount of RNA vs. $\Delta C_t$ values

4.1 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following single dose intravenous administration (5 mg/kg) in broiler chickens

4.2 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following single dose oral administration (5 mg/kg) in chickens

4.3 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following single dose oral administration (5 mg/kg) in piperine pretreated (10 mg/kg, p.o., for 3 days) broiler chickens

4.4 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following single dose oral administration (5 mg/kg) in quercetin pretreated (10 mg/kg, p.o., for 3 days) broiler chickens

4.5 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following single dose oral administration (5 mg/kg) in piperine and quercetin (combination) pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.6 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following single dose oral administration (5 mg/kg) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.7 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following repeated dose intravenous administration (5 mg/kg, for 5 days) in broiler chickens

4.8 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following repeated dose oral administration (5 mg/kg, for 5 days) in broiler chickens

4.9 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following repeated dose oral administration (5 mg/kg, for 5 days) in piperine pretreated (10 mg/kg, p.o., for 3 days) broiler chickens
4.10 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following repeated dose oral administration (5 mg/kg, for 5 days) in quercetin pretreated (10 mg/kg, p.o., for 3 days) broiler chickens

4.11 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following repeated dose oral administration (5 mg/kg, for 5 days) in piperine and quercetin (combination) pretreated (10 mg/kg, p.o., for 3 days) broiler chickens

4.12 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following repeated dose oral administration (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.13 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following single and repeated dose (5 mg/kg, for 5 days) intravenous administration in broiler chickens

4.14 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following single and repeated dose (5 mg/kg, for 5 days) oral administration in broiler chickens

4.15 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following single and repeated dose (5 mg/kg, for 5 days) oral administration in piperine pretreated (10 mg/kg, p.o., for 3 days) broiler chickens

4.16 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following single and repeated dose (5 mg/kg, for 5 days) oral administration in quercetin pretreated (10 mg/kg, p.o., for 3 days) broiler chickens

4.17 Semilogarithmic plot of marbofloxacin concentration in plasma versus time following single and repeated dose (5 mg/kg, for 5 days) oral administration in piperine and quercetin (combination) pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens
4.18 Hemoglobin (g/dL) level after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.19 Packed cell volume (%) after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.20 Total erythrocyte count ($\times 10^6$/cmm) after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.21 Total leukocyte count ($\times 10^3$/cmm) after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.22 Heterophil count (%) after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.23 Basophil count (%) after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.24 Eosinophil count (%) after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.25 Lymphocyte count (%) after daily intravenous and oral administration of marbofloxacin (5 mg/kg, 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., 3 days) chickens
4.26 Monocyte count (%) after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.27 Mean corpuscular volume (fL) after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.28 Mean corpuscular hemoglobin concentration (%) after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.29 Mean mean corpuscular hemoglobin (pg) level after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.30 Alanine aminotransferase (IU/L) level after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.31 Aspartate aminotransferase (IU/L) level after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.32 Lactate dehydrogenase (IU/L) level after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens
4.33 Alkaline phosphatase (IU/L) level after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.34 Total protein (g/dL) level after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.35 Albumin (g/dL) level after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.36 Globulin (g/dL) level after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.37 Creatinine (mg/dL) level after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.38 Blood urea nitrogen (mg/dL) level after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.39 Bilirubin (total) (mg/dL) level after daily intravenous and oral administration of marbofloxacin (5 mg/kg, for 5 days) alone and in piperine, quercetin and both in combination pretreated (10 mg/kg each, p.o., for 3 days) broiler chickens

4.40 Amplification curves of target genes CYP3A37, MDR1 and β-actin

4.41 Amplification plot of target genes CYP3A37, MDR1 and β-actin

4.42 Dissociation/melt curve of target gene CYP3A37 amplified product
4.43 Dissociation/melt curve of target gene MDR1 amplified product

4.44 Dissociation/melt curve of endogenous gene β-actin amplified product

4.45 Dissociation/melt curves of target genes CYP3A37, MDR1 and β-actin for confirmation of amplified product

4.46 CYP3A37 mRNA expression fold changes (2^ΔΔCt) after piperine, quercetin and both in combination (10 mg/kg each, p. o., for 3 days) pretreatment alone and with marbofloxacin repeated dose oral administration (5 mg/kg, for 5 days) in the liver and duodenum of broiler chickens

4.47 MDR1 mRNA expression fold changes (2^ΔΔCt) after piperine, quercetin and both in combination (10 mg/kg each, p. o., for 3 days) pretreatment alone and with marbofloxacin repeated dose oral administration (5 mg/kg, for 5 days) in the liver and duodenum of broiler chickens
