

LIST OF TABLES

Table No.	Title	On/After Page No.
2.1	Technical properties of the next generation platforms	14
3.1	List of instruments used in the present study	40
3.2	Reagents for DNA extraction and electrophoresis	41
3.3	Purity and Concentration of DNA from celery	43
3.4	Reagent used for gDNA fragmentation	46
3.5	Reaction setup for non-barcoded libraries	47
3.6	Thermal cycler programmes	47
3.7	Reference for the appropriate band size	49
3.8	Reagents used for library amplification	50
3.9	Thermal cycler program	50
3.10	Reagents for template preparation	52
3.11	Reagents used for template amplification	52
3.12	Components of Melt-OFF solution	54
3.13	Filling of 8-well strip	55
3.14	Preparation of reaction mixture for SSR	59
3.15	PCR conditions for SSR	60
4.1	Concentration of Genomic DNA	65
4.2	Concentration of amplified fragment library	65
4.3	Read length and pmol concentration of Amplified library	66
4.4	Statistical data of run on IonS5	67
4.5	Genome sequencing run details of celery	70
4.6	Before/after trimming report of reads	72
4.7	Assembly data generated from genome sequencing of Ajmer Celery-1	72
4.8	Nucleotide distribution of assembled data	73
4.9	A list of Encyclopedia of Genes and Genomes (KEGG) Pathway with enzyme ID and sequences number	78

4.10	List of 25 SSR primers of Celery (Ajmer Celery-1)	83
4.11	List of 25 SSR primers of Ajwain (Gujarat AJ-2)	87
4.12	List of 25 SSR primers of Fennel (Gujarat Fennel-2)	90
4.13	List of 25 SSR primers of Dill (Gujarat Dill-1)	93
4.14	Size, number of amplified bands, percent polymorphism and PIC obtained by SSR primers	97
